

Ideation Phase

Define The Problem Statement

Date	31 January 2025
Team ID	SWTID-2026-7089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Customer Problem Statement Template:

A customer problem statement helps the team understand the problem from the customer's point of view. For this project, the customers are the employees who request a standard laptop and the IT Hardware team members who fulfil those requests. Each statement below follows the five-part structure of the template.

I am	Describe the customer with 3-4 key characteristics: who are they?
I'm trying to	List the outcome or "job" the customer is trying to achieve.
But	Describe the problems or barriers that stand in the way.
Because	Enter the root cause of why the problem or barrier exists.
Which makes me feel	Describe the emotions the customer experiences as a result.

Project Context:

In the current process, standard laptop requests depend on manual effort after approval. Catalog tasks are created and assigned by hand, configuration details are shared separately, and the requester is not kept informed. This causes delays, extra follow-ups, and uncertainty. The project addresses this with an automated workflow built in ServiceNow Flow Designer.

Problem Statements:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	An employee who needs a standard laptop to carry out my daily work	get my laptop request processed and my laptop configured quickly	the procurement and configuration process involves manual steps and gets delayed after my request is approved	laptop configuration tasks are not efficiently automated once the request is approved	Frustrated and uncertain about when my laptop will be ready

PS-2	A member of the IT Hardware team responsible for configuring laptops	receive clear, complete configuration tasks as soon as a laptop request is approved	tasks have to be created and assigned manually, and follow-ups are needed to get the configuration details	there is no automatic catalog task creation, hardware team assignment, or task update after approval	Overloaded and frustrated by repetitive manual work
------	--	---	--	--	---

Selected Problem Statement:

PS-1 is selected as the primary problem statement for brainstorming, because the main project problem is inefficient, manual IT procurement, especially the delay in handling standard laptop configuration. PS-2 describes the Hardware team's side of the same problem and is resolved by the same automation (automatic task creation, assignment, and updates).
