

IDEATION PHASE

Empathize & Discover

Date	03 October 2026
Team ID	SWTID-2026-7089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map captures what a user thinks, feels, hears, sees, says, and does, along with their pains and gains. It helps the team understand the real problem from the user's point of view before designing a solution. Example: Standard Laptop Request Process

User: Employee requesting a standard laptop	User: Employee requesting a standard laptop
Think & Feel What really counts, major preoccupations, worries and aspirations "When will my laptop be ready? I can't start work properly without it." Worried that the request is stuck somewhere with no visibility Frustrated at having to chase the IT team for updates Hopes for a quick, hassle-free, standard setup	Think & Feel What really counts, major preoccupations, worries and aspirations "When will my laptop be ready? I can't start work properly without it." Worried that the request is stuck somewhere with no visibility Frustrated at having to chase the IT team for updates Hopes for a quick, hassle-free, standard setup
Hear What friends, manager and colleagues say Manager: "Have you got your laptop yet?" Colleagues: "My request took days after approval." IT team: "Your request is being processed." Colleagues say that following up by email or phone is usually necessary	See Environment, colleagues, what the market offers A request that stays "in progress" with no clear status Colleagues already working on their new laptops Other tools and services that give instant confirmations and live tracking No notification when configuration starts
Say & Do Attitude in public, behaviour towards others Submits a standard laptop request through the service catalog Emails or calls the IT team to ask about progress Asks the manager to escalate when the wait gets long Uses a temporary device or delays tasks until the laptop arrives	Say & Do Attitude in public, behaviour towards others Submits a standard laptop request through the service catalog Emails or calls the IT team to ask about progress Asks the manager to escalate when the wait gets long Uses a temporary device or delays tasks until the laptop arrives
Pain Fears, frustrations, obstacles Manual processing after approval causes delays No confirmation that the approved request is being worked on No notification when laptop configuration begins Repeated follow-ups waste time Uncertainty about the delivery date	Gain Wants and needs, measures of success Faster processing of standard laptop requests Automatic email confirmation after approval Notification when configuration starts Clear, real-time request status Predictable delivery and less need to follow up

Key Insights:

Employees are mainly frustrated by delays and lack of visibility after their request is approved.

Manual task creation, assignment, and follow-up cause most of the waiting time.

Timely email confirmation and a configuration-start notification would reduce uncertainty and follow-up effort.

These insights led to the selected idea: an automated standard laptop procurement workflow using ServiceNow Flow Designer (Approval → Catalog Task → Hardware Assignment → Configuration → Email Notification).
