Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	2 Marks

Problem Statement

Organizations frequently receive employee requests for standard laptops through manual IT procurement processes. These requests may involve emails, spreadsheets, approval messages, and multiple interactions between employees, managers, IT teams, procurement teams, and vendors.

The manual process can result in:

- Delays in approving and processing laptop requests.
- Repetitive administrative work for IT and procurement teams.
- Inconsistent information in purchase requests.
- Difficulty tracking request status.
- Human errors during order processing.
- Lack of standardized approval and fulfillment workflows.
- Poor visibility into the overall procurement process.

The target customers are employees requesting standard laptops, managers approving requests, IT support teams, and procurement teams.

Customer Need

Customers need a simple and standardized way to request a standard laptop, obtain the required approvals, automatically initiate procurement activities, and track the request until fulfillment.

Proposed Solution Fit

The proposed solution uses Flow Designer to automate the standard laptop procurement workflow. When an employee submits a laptop request, the system validates the request, routes it for approval, and automatically triggers the appropriate downstream procurement and fulfillment activities.

This reduces manual intervention while providing better visibility and consistency throughout the process.

Expected Outcome

The solution is expected to:

- Reduce procurement processing time.
- Minimize manual administrative work.
- Standardize laptop ordering.
- Improve approval and fulfillment tracking.
- Reduce errors caused by manual data entry.
- Improve employee and IT team satisfaction.
- Provide a repeatable workflow that can be extended to other IT equipment.

Problem - Solution Fit: Automating Standard Laptop Orders With Flow Designer

1. CUSTOMER SEGMENT(S) CS • Employees and new joiners who need a standard laptop • Managers who approve laptop requests • IT procurement / service desk team	6. CUSTOMER CONSTRAINTS CC • Budget limits and approval policies • Limited stock of standard models • Tight onboarding timelines • Must use the company's existing IT service tools	5. AVAILABLE SOLUTIONS AS • Email / phone requests, spreadsheets, manual tickets Pros: familiar, no setup Cons: slow, error-prone, duplicate data entry, no status tracking
2. JOBS-TO-BE-DONE / PROBLEMS J&P • Request a laptop quickly and correctly • Get managers' approval without chasing • Track order status end to end • IT needs to fulfil orders without re-entering data	9. PROBLEM ROOT CAUSE RC • Ordering is manual and disconnected • Approvals happen over email and chat • No standard workflow or automation • No visibility of request status, so repeated follow-ups	7. BEHAVIOUR BE • Already raise IT requests through the service portal • Send email/chat follow-ups for status • Managers approve from mobile when notified • Prefer self-service over calling the help desk
3. TRIGGERS TR • New hire onboarding • Laptop refresh cycle, damaged or lost device • Role change or project start	10. YOUR SOLUTION SL Flow Designer automation: employee submits a Service Catalog request, the flow routes it for manager approval, checks stock and budget, creates the fulfilment task for IT, sends status notifications at each stage and closes the request on delivery.	8.1 ONLINE (CHANNELS OF BEHAVIOUR) CH • ServiceNow portal and catalog form • Email, Teams/Slack alerts, mobile app
4. EMOTIONS: BEFORE / AFTER EM Before: frustrated, anxious, dependent on follow-ups After: confident, relieved, in control with live status		8.2 OFFLINE (CHANNELS OF BEHAVIOUR) CH • IT service desk visits • HR induction and onboarding sessions
