Proposed Solution Template**

Date	03 October 2026
Team ID	SWTID-2026-7089
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders With Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

The project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Ordering a standard laptop in most organizations is a manual, multi-step process. Employees raise requests by email or phone, managers approve over chat or email, and the IT team re-enters the details into procurement systems. This causes delays, lost or duplicate requests, inconsistent approvals, no visibility into order status, and a heavy workload for the IT procurement team on a task that is routine and repetitive.
2.	Idea / Solution description	Automate the whole standard laptop ordering process using ServiceNow Flow Designer. An employee submits a request through a Service Catalog item and picks a standard laptop model. The flow automatically routes it to the manager for approval, checks stock or budget, creates the procurement or fulfillment task for IT, and sends status notifications at each stage. Once the laptop is delivered, the request closes automatically. No-code flows, approvals and notifications replace manual follow-ups.
3.	Novelty / Uniqueness	Uses a low-code/no-code approach (Flow Designer) instead of custom scripting, so the flow is quick to build and easy to modify. It offers a single catalog form with standardized laptop options, rule-based automatic approvals and routing, real-time status tracking, and reusable flow components that can be extended to other hardware (monitors, phones, accessories) with little effort.
4.	Social Impact / Customer Satisfaction	Employees get faster delivery, fewer follow-ups and transparent tracking, which improves their experience and productivity. New joiners can be equipped on time. IT staff are freed from repetitive tasks to focus on higher-value work.

		Standardized ordering reduces errors and paperwork, and the digital process cuts paper and email clutter.
5.	Business Model (Revenue Model)	The solution is mainly a cost-saving and efficiency model for the organization. It reduces manual effort and processing time per order, avoids procurement errors and duplicate purchases, and enables bulk ordering and better vendor negotiation through standardization. It can also be offered as a packaged ServiceNow solution or add-on to other organizations through a one-time implementation fee plus a subscription or support fee.
6.	Scalability of the Solution	The flow is modular and can scale from a single department to the whole enterprise and multiple locations. More laptop models, approval levels, vendors and regions can be added by changing flow configuration rather than rebuilding. The same design can be reused for other IT requests such as software licenses, peripherals and mobile devices, and it can integrate with vendor or ERP systems through ServiceNow's integration capabilities as order volume grows.
